Objectives

In this lesson, you will read about diversity and technology careers. The reading will describe what diversity is and why some people say there is not enough diversity in the tech industry. I'm sure you hear the word diversity a lot, and that you have an idea what it means. Have you ever thought about how to *measure* diversity, or why measuring diversity would be important? Keep these questions in mind as you read.

There are three **objectives** or goals of this exercise:

- (1) Become informed about the important issue of diversity in the tech industry.
- (2) Learn about how industry, government, and individuals are responding to this issue.
- (3) Consider your own role in this issue and how you can contribute your talents.
